Dear Ms. Doe:

It is my pleasure to be applying for the Summer Research Internship at Northwell Health. I am a rising junior at Stony Brook University. I am pursuing a Bachelor of Science degree in Biology with a declared concentration in Interdisciplinary Studies and a minor in Chemistry on the premedical track. This position will allow me to contribute to the advancement of science as well as enable me to develop valuable data management skills.

I am currently a Research Assistant with the Lab for Scalable Mental Health at Stony Brook University. I recruit participants from the ages of eleven to sixteen for our study as well as maintain accurate records in our database for them. This position has allocated me with transferrable skills that I would be able to apply to this internship such as great attention to detail and working with data. Furthermore, I hold extensive communication skills as a result of my outreach efforts in this position. In addition to this, my role as a Research Assistant has allowed me to further my skills with Microsoft Office. Throughout my undergraduate career thus far at Stony Brook University, I have taken several STEM courses such as Cellular and Organ Physiology and Calculus as a result of my science-focused degree as well as my rigorous premedical coursework. In doing this, I have developed an even deeper admiration and understanding of STEM education that I can display and actively push forward upon hopeful acceptance. This past semester at Stony Brook University, I also began tutoring General Chemistry on campus due to my commitment to STEM education.

I am a self-motivated and driven student which I have demonstrated in my undergraduate work through my exceptional GPA. These traits follow me in all the work I pursue and therefore, I am adaptable and a fast learner willing to be committed to learning new techniques and programming. In all my activities that I have been a part of, I have always been a member of a dynamic team where I have learned that supporting my fellow team members is crucial in being successful.

I am willing to bring this same mindset with me as a Summer Research Intern at Northwell Health Intern if I am chosen for the program. By gaining experience in the field of data management, I hope to continue using these skills in my current undergraduate research work as well as in the future since I aspire to continue conducting research even beyond my undergraduate years. The potential of being able to inspire, educate, and inform in the fields of science and research is very important to me and I would be excited to accomplish that this early in my career. Thank you for your time and consideration and I look forward to hearing from you.

Sincerely,  
Wolfie Seawolf
