

Frank W. Fowler

Professor of Chemistry
1968-2014

Educator Extraordinaire

Scheme VII

Stereochemical alternatives for intramolecular Diels-Alder reaction for 4-substituted azadienes, *Journal of the American Chemical Society*, **105**, 7696 (1983).

Professor Fowler's research focused on the synthesis of heterocyclic compounds, featuring novel applications of intramolecular Diels-Alder reactions, and on supramolecular solids. His work in the teaching of organic chemistry at Stony Brook transformed the course and defined the model for student-centered active learning in large courses.
