

# BNL: Overview and Energy Initiatives

*Doon Gibbs  
Deputy Director for  
Science & Technology  
October 25, 2007*

SIXTY YEARS  
OF DISCOVERY  
1947-2007

---

**BROOKHAVEN**  
NATIONAL LABORATORY

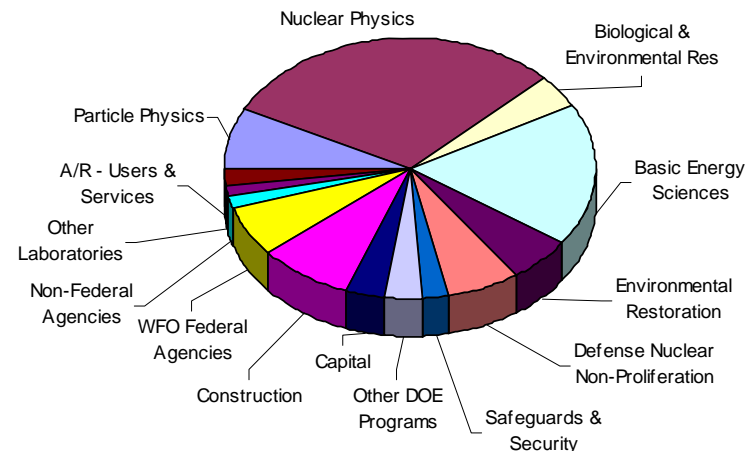

# Aerial View of BNL

# Snapshot

- BNL is celebrating its 60<sup>th</sup> anniversary
- Six Nobel Prizes garnered
  - Latest in 2002 and 2003
- ~2600 employees
- >4000 scientific facility users annually
- S&T Portfolio
  - Nuclear & Particle Physics
  - Basic Energy Sciences
  - Life Sciences
  - Environment
  - National Security
  - Computational Science

FY 2007 New Funds  
\$492 Million

2/3 from Office of Science

# DOE Mission

Discover the Solutions that Power and Secure America's Future

# BNL Approach

An Integrated, Coherent Approach Among Core Programs, Facilities, Collabs. and Users

RHIC I, II

CFN

NSLS I, II, JPSI

NY Blue

BES, BER, EENS, NPP

Core programs

Facilities

Collaborators, Users

## Science Challenges

- Energy Security/Climate Change
- Origins of the Universe
- The Standard Model
- Accelerator Science/Detectors
- Understanding/Curing Addiction
- National Security

SBU, Columbia, Cornell

IBM, GE, Toyota, GM, LI Industry

# National Synchrotron Light Source

- Crucial resource for the Northeast
  - 2100 Users in FY 2006
  - 400 institutions
    - academic, industrial, government
  - > 900 publications in FY 2006 (a record)
  - ~ 25% in premier journals

- Vital for BNL programs:
  - Energy, CFN, Catalysis Center, Structural Biology, Environment
- What's next: NSLS-II
  - NSLS ~25 years old

# NSLS-II: Enable the Nanoscience Revolution

- World-leading performance
  - 10,000 brighter than NSLS
  - 1 nm spatial resolution
  - 0.1 meV energy resolution
  - Synergy with the CFN
    - Dynamical characterization of new materials, reactions, processes
- CD-1 announced on July 17
  - \$750-925M TPC
  - Full operations in FY2015
    - Comparable in scope to RHIC operations

# Center for Functional Nanomaterials

To develop and share materials and processes at the nano-scale to address the country's critical needs

## Themes

- **Electronic Nanomaterials**
- **Soft/Bio Nanomaterials**
- **Nanocatalysis/Interfaces**

- **Properties: User-oriented, Focused on energy**
- **Capabilities: Preparation, Characterization, Understanding, New Techniques**
  - User facility, fully operational 5/08
  - In FY 2006, 91 proposals received; 88 accepted; 31 new

# U.S. Energy Flows and Consumption

## U.S. Energy Flow Trends – 2002 Net Primary Resource Consumption ~97 Quads

Source: Production and end-use data from Energy Information Administration, *Annual Energy Review 2002*.  
 \*Net fossil-fuel electrical imports.  
 \*\*Biomass/other includes wood, waste, alcohol, geothermal, solar, and wind.

June 2004  
 Lawrence Livermore  
 National Laboratory  
<http://eed.llnl.gov/flow>

...effective use of renewable energy through improved conversion, transmission, and storage

# Brookhaven Strategic Plan

## BNL Initiatives

NSLS-II

CFN/Nanoscience

New York Blue

RHIC → RHICII → eRHIC

## BNL Energy Vision

Basic/applied research underlying breakthroughs in effective use of renewable energy through improved conversion, transmission, and storage

## Energy Themes

- Catalysis
- Solar
- Complex Materials
- Biofuels

Focused Energy  
LDRD Investment

Nanocatalyst

Solar Fuel, PV

Superconductor

Engineered Enzyme,  
combustion

**BROOKHAVEN**

**Partners: SBU/Universities/Industry**

# BNL Energy Portfolio

Basic and applied research underlying breakthroughs in efficient use of renewable energy

## Production/ Conversion

Biofuels  
Solar Fuels  
Solar PV  
Catalysis

## Transmission

Superconductivity  
Materials

## Storage

Catalysis/Electro  
chem.  
- Fuel Cells  
- Batteries  
New Materials

## End Use

Biofuels (Combustion)  
Solid State Lighting  
Catalysis

CFN, NSLS I, II, New York Blue

# Spectrum of energy research

## Discovery Research

- Basic research for fundamental new understanding
- Development of new tools, techniques, and facilities

Office of Science

## Use-inspired Basic Research

- Basic research for new understanding specifically to overcome showstoppers on real-world materials.

## Applied Research

- Research with the goal of meeting technical targets, with emphasis on the development, performance, cost reduction, and durability of materials and components or on efficient processes
- Proof of technology concept

Technology Offices

## Technology Maturation & Deployment

- Cost reduction
- Scale-up research
- Prototyping
- Manufacturing R&D
- Deployment support

# Brookhaven: "Complete spectrum" of energy research

Discovery Research

Use-inspired Basic Research

Applied Research

Technology Maturation & Deployment

## Fuel Cell Nanocatalysis

Challenge: Pt loading, activity, stability

-Solution: Pt submonolayer on nanoparticles

## CRADAs with Industry

- GM: Scale up of nanocatalyst synthesis
- Toyota: Oxygen reduction new nanocatalysts
- Battelle: Integration with fuel cell membranes
- Dupont: Methanol oxidation nanocatalysts

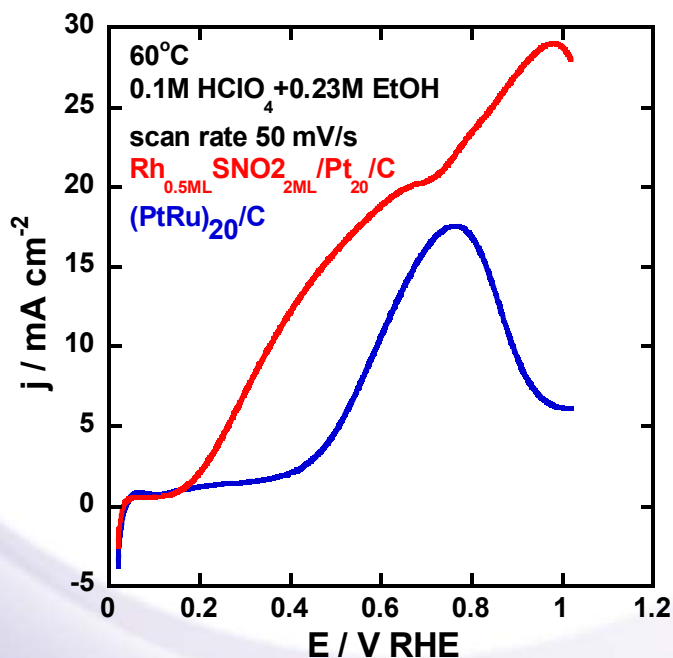

# Energy Storage: Catalysis/Electrochemistry

## Direct Ethanol Fuel Cell

Challenge: C-C bond is broken only at extreme potentials

Solution: Pt/SnO<sub>2</sub>/Rh Catalyst

## Lithium Batteries

Challenge: capacity, cycle life, charge time

Solution: Nanostructured electrode materials for larger area electrodes

Electron micrographs of nanostructured Li-Al-Sn prepared at BNL.

Capacity 10 x Industry Standard

# Transmission: Superconductivity

Opportunity: Improving infrastructure of the electrical grid

Capacity

Reliability

Efficiency

Lower Manhattan underground infrastructure. Courtesy Con Edison

SC Cable  
5x capacity of Cu

Current

SC Wire IS the controller  
Self-healing

SC Wire: less transmission loss

Challenge: chemically and structurally complex

*High quality synthesis essential for progress*

The unit cell of  $\text{Bi}_2\text{Sr}_2\text{Ca}_4\text{Cu}_5\text{O}_{14}$  contains 54 atoms!

# 3<sup>rd</sup> generation MBE: Discovery of interface superconductivity

Solution: Atomic *layer-by-layer* molecular beam epitaxy (MBE) machine  
Grow 1 layer at a time

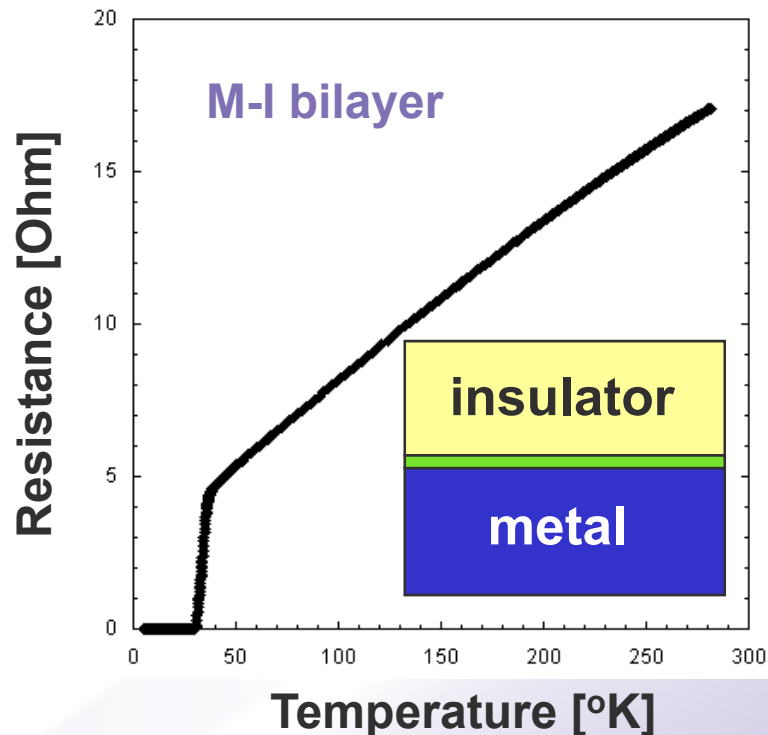

AFM

## Interface Superconductivity

- Superconductivity at an interface between two materials that are NOT superconducting

EERE: Superconducting wires  
CRADA: American superconductor

# Production: Biofuels

- Understand at the molecular level the fundamental mechanisms that catalyze biological conversions of materials
- Develop tools and methods for engineering plant and microbial enzyme systems

## BNL/NREL: Poplar biomass

- alternative to corn (marginal land use)

Poplar  
plantation

Poplar biomass

Bioethanol  
production

Fuel

Exploit endophyte mechanisms: improve plant growth over 40%

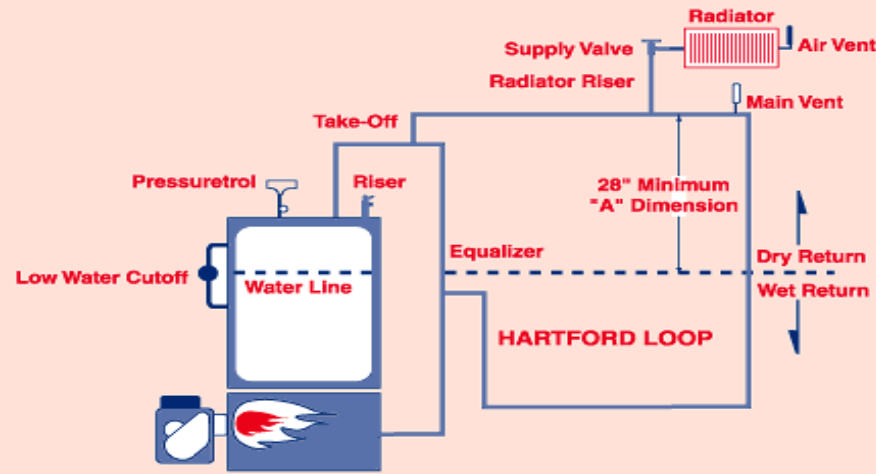

# End Use: Biofuels

- Genetically engineered microbes to produce desired fuels
- Combustion research

Specifically designed biofuel: Reduced storage degradation, better cold-flow properties, cleaner combustion

Engineering to form oils with desired properties: high energy content/clean burning

*A typical configuration for a one-pipe steam heating system.*

**Renewable Energy Long Island**

**Changing World Technologies – Long Island**

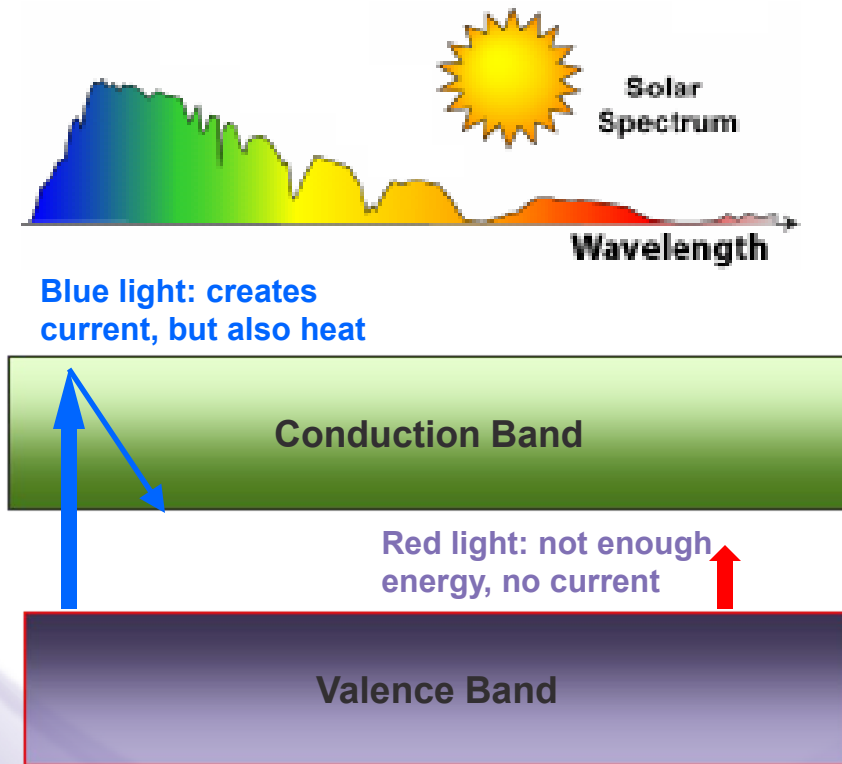

**Heat Wise, Inc. – Long Island**

**Fulton Boiler Co. – Fulton, N.Y.**

**Oilheat Institute of Long Island**

# The Role of Science and Basic Research

Challenge: Efficiency Limit in Conventional Photovoltaics (32%)

Opportunity: Unusual physics of nanoparticles

- Recovering Heat Normally Lost

**Best compromise: 32% efficiency**

# Conversion: Carbon Nanotube Photovoltaic Device

World's smallest  
Photovoltaic

Nanomaterial diversity is a challenge for nanoscience—there are many different structures.

How do we pick out the ones with the best properties?—BNL FACILITIES

Freitag, Misewich et al., Nano Letters 3, 1067 (2003)

# Facility Solutions: High sensitivity for nanomaterials

## NSLS: IR Beamline

Determining the photoconductivity of a single nanotube

## CFN: TEM Facility

Determining the physical structure of the same single nanotube

*Working in concert to provide new insight into nanoscience*

Sfeir, Zhu, Misewich et al. Science 312, 554 (2006)

# BNL Impacts: Future Vehicle Fleet

Largest user of petroleum is transportation (drives fuel switching)

Energy lost is greater than energy used (drives efficiency, recovery and storage)

## Hydrogen Hybrid Electric...

### Biodiesel

Efficient  
plant/produce  
engineering

### Superconductors

Reliable grid to bring  
power to charge  
batteries for plug in  
hybrids

### Lithium Ion Battery Pack

improved electrodes and  
electrolytes

### Hydrogen Storage

understanding of  
alanate storage  
mechanisms/catalysis

### Thermoelectric heat recovery

nanostructured high  
thermopower materials

### Direct ethanol fuel cells

nanocatalysts for C-C  
bond breaking

### Fuel cell catalysts

stable nanocatalysts with  
high activity, low loading
